

Did you know cats get high blood pressure?

It's not just people who suffer from high blood pressure. Our pets can too.

If left unmanaged, high blood pressure can damage the eyes, kidneys, heart, and brain. If picked up early, high blood pressure can be easily managed with medication.

High blood pressure (hypertension) affects 1 in 5 cats over 9 years old.

Here at Green Pastures we recommend regular blood pressure checks if your cat is:

- 9 years or older
- Has kidney disease
- Has an overactive thyroid
